KNEE-HIGH NATURALISTS

All About Animals

Tues. June 18 - Fri. June 21

Do you love critters of all shapes and sizes? Learn all about the animals that call Wisconsin their home! Through activities, crafts, and stories, we will learn what makes different critters special, where these animals live, what they eat, and how they grow.

Superpower Senses

Tues. July 16 - Fri. July 19

Sight, smell, taste, touch, and hearing are our five senses. When we focus on using our senses, it can feel like a superpower! We will explore the outdoors through activities that use one of our five senses to bring us closer to nature.

NATURE RANGERS

Forest Fun

Tues. June 25 - Fri. June 28

The forest is home to many different plants and animals, all with important jobs we take for granted. Put on your Naturalist hat and learn through hikes and activities who lives in the forest and what makes the Wisconsin woods such a special place.

Art in Nature

Tues. July 23 - Fri. July 26

When you combine art and the outdoors, it's a perfect match! Get ready to get creative and learn how art can connect us to nature. We'll use the great outdoors as inspiration as we try different art mediums, create a nature journal, and complete various crafts.

ECO-EXPLORERS

Creepy Critters

Tues. July 9 - Fri. July 12

If you're interested in the scaly, slimy, or creepy crawly, this is the camp for you! Through hikes and activities we will explore what makes the often less-loved creatures of Wisconsin, like snakes, bats, spiders, and frogs, special and important to our environment.

Survival Strategies

Tues. July 30 - Fri. August 2

A nice afternoon in the outdoors can turn into a survival situation without warning, are you prepared? We'll have fun learning outdoor skills like shelter building, fire starting, navigation, and knot tying. These skills will help prepare you for a tricky situation and boost your confidence in the outdoors.

Registration confirmation and medical release forms will be emailed post registration.
