LETTER FROM

Dear Readers:

I am very excited that you have purchased my magazine and are reading it. If you are a person that likes adventure then this is the magazine for you.

My goal with this magazine is entertain and influence the readers about having fun with recreational vehicles. Some of which are: dirt bikes, ATV's, etc. Also to inform people on how the vehicles are not just fun but they are also very useful for doing chores.

My personal goals with this magazine are to get people interested in reading. The main goal that I had with this magazine was to improve my writing and fluency skills and enhance them when doing projects such as this one. Also in addition my other main personal goal is to someday own many types of these vehicles and use them and have fun.

I had many different experiences with this project. One of the main experiences was learning how to socialize and communicate with other people better. Another one of the experiences that I had with this project was responsibility because when I made deals then people were relying on me to finish so that their magazine could be successful as well. Finally the last experience that I had was a time crunch. I had to have certain things done in a certain amount of time otherwise they would be late and would also be downgraded. Those were some of my main experiences that I had with this project.

During the duration of this project I encountered many different people. I made deals with and got advice for my magazine from. I discovered that every individual has their own unique way of writing and thinking. Because everybody is different that is what makes all of our magazines interesting because they all have so much variety in them.

There were also many struggles that followed this project. Some of the struggles were relying on people to have you work done for you when it was due. Another one of the main struggles was getting people to make deals because some people had already made deals with others and did not need to make any more so they were done.

One of the biggest struggles was making the deals because most of the people that you made deals with were not your best friends and you were very unfamiliar with them. The last struggle was trying to give that person the completed copy or draft because most of the people that made deals were all in different classes, so when the deadline came around you had to find the time to find that person and make the deal.

There were also many successes that followed also. One of the biggest successes was getting a lot of things done before they were due. Because if the things were done before they were due then that gives you time to think and move on to the next project and not be rushed. If you are rushed then the work you make is sloppy and if the work that you make is sloppy then you will disappoint the buyer and also the teacher. Another one of my successes was making deals and being able to manage the money that we used well. I was never to short of money and never over I was always right on the dot. Also all of my deals matched up and I never failed to make a single deal during the whole time of this project. Finally my last success was being able to get along with all of the peoples that I made deals with. Because if you do not like what you are doing or who you are doing it with then why bother at all. Those were all of my successes during the extent of this project.

There were many outstanding entries and articles that were entered by a various amount of people. One of my personal favorite entries was a one to two column article that was entered by Ryan Talo, the

THE EDITOR

reason that I liked this article was because it was very descriptive and gave a lot of variety in the word choice and sentence fluency. The final thing that I liked was the Volksturn ad that was done by Bryce Weyenberg. I found the pictures and colors very interesting.

I would like to say thank you for reading and I hope you purchase the next volume of Rolling, Rolling, Rolling.

Sincerely,

Noah Verhage

LETTERS TO THE EDITOR

Dear Editor:

I just love your magazine so much. I got so into your articles I could not stop reading them. Your Ads are so convincing I bought all of them. You inspire me to start making my own magazine. Thanks for making this magazine looking forward to your next magazine.

Sincerely,

Mike Sullivan
Greentown, Florida

Dear Editor:

This magazine about recreation vehicles taught me a lot. The articles were amazing and the ads so convincing that I went out and bought some of the items myself. The article written by Trevor Stevens is very interesting. The best vehicle on wheels there is.

Sincerely,

Tyler Janke
Greentown, Pluto

Crash

By: Anna Engberg

Alex Noname had left to go camping on Friday in Armstrong Creek Wisconsin and was supposed to return home Sunday late that weekend. Alex Noname was going up north with his friends to go four wheeling and dirt biking. He does this about once a month and returns safely each time except this time he went. He crashed his four-wheeler and it was a bad accident. Alex had been killed from injuries he received while riding an adult sized ATV.

Alex was the kind of person who was safe at all times. He would always wear a helmet to be safe. Alex loved sports, watching them on television, or playing them with his friends. He liked playing football with his dad, baseball with his friends, and field hockey with his team mates. Alex Noname loved hanging out with his friends after school and in the summer. He absolutely loves going up north with them to have a great time. When Alex goes up north with his friends, there are three adults that go with them as well. Adults go to supervise the younger kids so they don't get injuries when riding their ATV. Every time Alex went up north, he would always ride his four-wheeler. Four wheeling is his favorite thing to do! This time when he went up north, something bad happened that everyone will remember.

The four-wheeler Alex was driving was going about 75 miles per hour. The 500 pound machine that Alex Noname was riding landed on top of him. Alex was just twelve years old when he had his big crash.

Alex Noname had been riding four-wheelers as long as he can remember. He always used to ride his grandpa's four-wheeler that he loved. This time he wasn't riding his grandpa's four-wheeler, he was riding his uncle's four-wheeler and wasn't used to the steering of it. Alex was going to

fast around a dirt track he made with his uncle Mike and hit a big rock and went off course. Alex lost all control and the four-wheeler ran right into a big oak tree. The four-wheeler then flipped upside down landing on Alex Noname.

No one saw the crash right away. Alex's friends were riding the dirt track with Alex and when they passed Alex, they went to go help him but Alex didn't say anything. The kids called his uncle Mike to come and see what happened to Alex. When Mike showed up, he didn't know what to do. He quickly dialed 911 for more help. Everybody was scared and didn't know when the first responders would come. The kids helped Mike get the four-wheeler off of Alex. When they got the ATV off him, they saw lots of blood everywhere. Everyone said that this was the scariest thing they ever saw.

The first responders quickly came to Alex to see what had happened. They carried Alex into the ambulance and everyone hopped inside to ride to the hospital. Alex then got to the hospital and was quickly wheeled away from his friends. The friends sat in the hospital waiting room to wait for Alex. Everyone who was waiting for Alex was waiting for more than five hours. The doctor came out and sadly said that Alex Noname suffered from a concussion and is paralyzed from the waist down for the rest of his life. Everyone was shocked to hear this news. They then went into his hospital bed to say hi. He could barely talk and move. He softly said that he was doing fine but everyone could tell he was in a lot of pain. Everyone was excited to hear him talking but they were also really scared. The doctor came in the room and told the kids they now had to leave the room for just a moment.

Alex Noname suffered from a concussion for five in a half weeks. He now has to live in a wheelchair the rest of his life.

He can never be able to walk again or do his favorite activity, four wheeling. He says "I should have never been going that fast and should have been paying more attention to the trail I was on." Alex says he now regrets going up north that weekend he crashed. He still hangs out with his friends and he still watches them four-wheel. Instead of riding his four-wheel he now goes to races and watches people race four-wheels. He will never forget this time in his life that he crashed his ATV.

New Recreational Vehicles Unveiled

By: Adam Reimer

Last week, a new company came to the Recreational Vehicle market. After the company announced that, they unveiled the model of their new vehicle. The news of the parts involved is spreading and making the leading manufacturers nervous. We are here to take a look at why the feedback of the vehicle model is so positive and making the leading companies worry about their product sales.

One of the features of the company's vehicles is that the vehicle is fuel efficient. The company ensured that the tank on each of their products is able to hold up to eighty-nine percent more than the tank on most of their competition's products. The company also stated that the vehicle can go further on each gallon of fuel than any of the competitors vehicles are able to go. The vehicle is able to longer distances than any other recreational vehicle on the market with less fuel.

Another reason is that the vehicle lasts much longer than any other recreational vehicle on that is currently on the market. The vehicle can go much further than any other recreational vehicle on the market before the vehicle breaks down. That is because they are using better engines than most other vehicles that are out in the market today. The engines are also affordable, so they will not launch the price of the recreational vehicle up to much.

The recreational vehicles price is also much more affordable than the company's competition. The company is using materials and parts that are lower in price yet still have good quality. The parts that are used in the vehicles are either equal or greater than the quality of the same type of part that competing brands are using in their recreational vehicles. None of the parts

that are used are lower quality than what is currently out on the market.

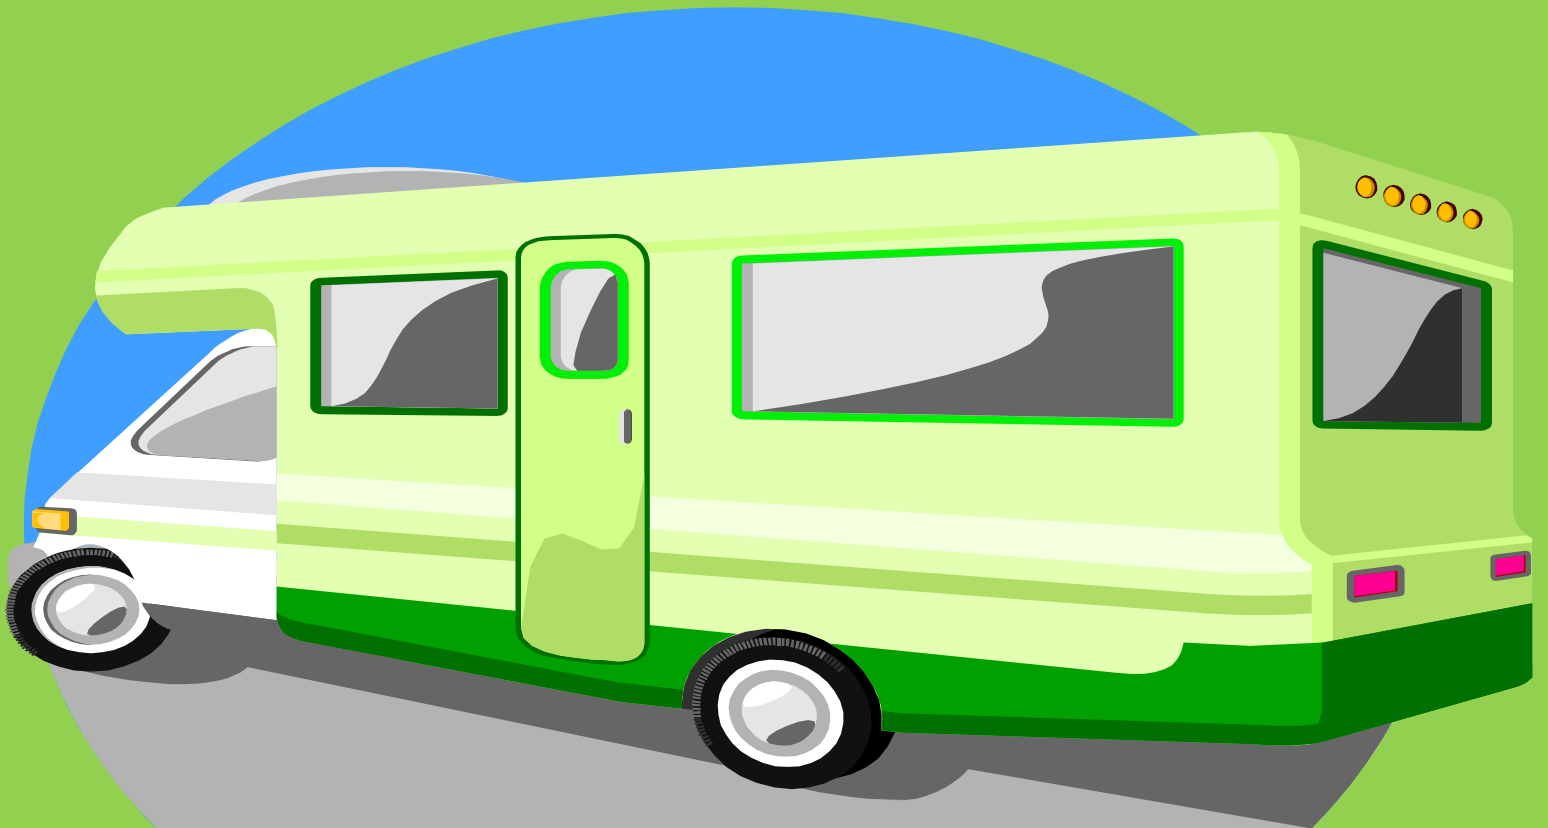

Also, the recreational vehicle is more durable than what the company's competition is currently making. The recreational vehicle is able to drive over almost any type of terrain. The vehicle does not wear out any faster on uneven terrain than it does on a normal road. The company is even working on making it so that it feels like a smooth ride despite if you're going on uneven terrains.

The company also ensures that the vehicle is the best quality that you will find out on the market. Like we said before, the vehicle has better quality parts than any other recreational vehicle manufacturer. This is because the parts that are used in the vehicle do not wear out as faster than the parts that are used in their competitor's recreational vehicles. The parts are also made by cheaper materials so that the cost in making the parts is lower and ultimately lowers the price of the entire vehicle.

The vehicle is also more environmentally friendly than any other vehicle that is on the market currently. This is because the vehicle uses up the gas that you put into the tank at a slower rate than any other recreational vehicle on the market. Some of the parts that are used in the vehicle are made from environmentally friendly materials that are safer for the environment than any other vehicle that is on the market. The parts that are not made by environmentally friendly materials are because they were not able to be made by environmentally and still be of high quality. However, those parts are made to use less energy which will limit the amount of pollution produced.

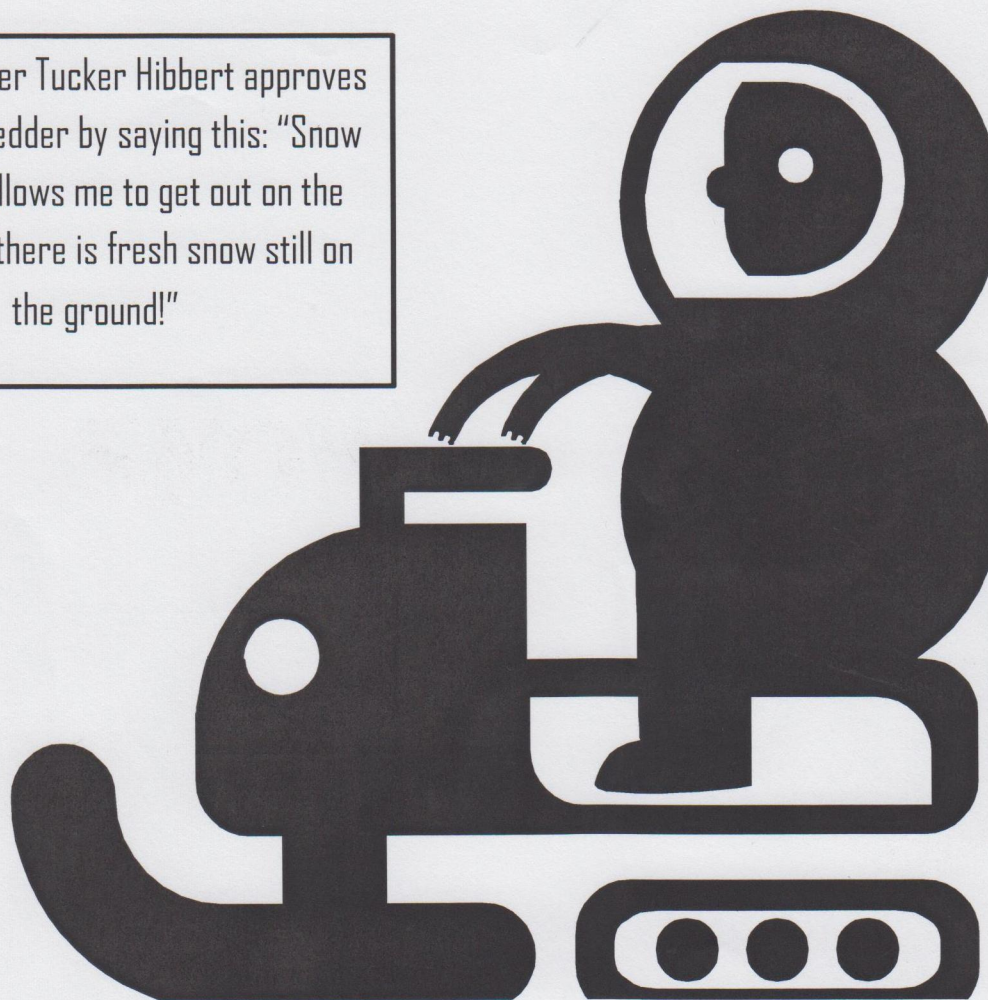

The company only confirmed that they will be selling recreational vehicles, yet they have already put the competitors into the shadows. The company has been putting a lot of pressure on themselves with all these

promises. They were able to use these and are currently estimating that they will sell almost two million vehicles in the first month of sales. Whether the company is able to live up to this, we will have to see for ourselves.

SNOW SHREDDER

Star sled racer Tucker Hibbert approves to Snow Shredder by saying this: "Snow Shredder allows me to get out on the trails when there is fresh snow still on the ground!"

Snow Shredder comes with a handy guide that teaches you about the exciting water-skippin feature included on the Sled!

The New Bear Cat ATV

By: Josh Remter

Recently the well-known off road vehicle making company Artic Cat has come out with a new way to define fun. They had made the new ATV (all-terrain vehicle) called by the name Bear Cat. The Bear Cat comes with tracks made by Camoplast and the fenders are packed with foam so if you get too deep you will stay afloat. The Bear Cat has a built in snorkel kit like a lot of Artic Cat's four wheelers, but this one is improved to the max. The deeper the water, the higher the snorkel intakes get so that you don't take on water. Also this four wheeler has stability bars so you don't tip forward and sink your four wheeler. This off road vehicle has everything a hunter, redneck, or nature loving person would buy to do what they love to do.

This awesome four wheeler will appeal to hunters so they can go hunt in the deep swamps where all the big swamp donkeys are hiding. Rednecks will love this because they can go in all the mud they want and as deep as they want. Last for the nature loving freaks you can go where no person has gone and where all the beautiful animals have been hiding for centuries. Your name will be all over your town about where you have been. Many people will want to steal this machine but with a rider identification system will keep this from happening. Equipped with a finger print scanner to unlock the wheels and drive the machine will also keep someone from putting it on a trailer and stealing it. So there is no need to have a material key all you need is your finger.

Artic Cat has done well with this machine since they already sold 1,500 Bear Cat units in the past week. The Bear Cat is priced for people to have fun not for Artic Cat to make money yet the quality of the machine is amazing. When I go to my water

cross races for snowmobiles I bring my along with me. If you skip snowmobiles for a living buy one of these machines it will pull your sled out of the deepest lakes in the world. I have pulled out a 1986 Yamaha Phazer 485 out of a swamp that was 100 feet deep with crocodiles in it. Trust me it'll have your sled out in ten minutes depending on where you are. There are also many other attachments for this ATV such as mud wheels, street slicks, and plows, also buy blinker kits and make it street legal. I highly recommend this four wheeler over any other.

ATV's

By: Trevor Stevens

One of the newest and hottest four-wheelers around is the Aminor. The Aminor has quite a bit of horsepower at 715. The engine is the same as a Camaro. When we tested the Aminor out it maxed out at 110 miles per hour. This four-wheeler can also drive through five feet of mud. The Aminor is rated five stars out of five. The Aminor has also got some of the best review for a four-wheeler. This four-wheeler just plain out a beast said someone on a review. These four-wheelers are never in stock, so if you want one you're going to have to wait quite a while to get your Aminor. At \$22,799 these four-wheelers are really cheap for what they are really worth.

Bryan Boom from Swamp Land, Swampy said that his four-wheeler can just do anything he wants with the Aminor. He said it could go through six feet of mud, four feet of water, it can drive straight up a mountain, and it also pulled five tons of logs. In the winter I slap that plow on the four-wheeler and it plow three miles in about ten minutes. After he test drove an Aminor, he said this is the best four-wheeler that was ever made. The next day he came back to the dealership with his truck and trailer and bought the Aminor for more than they were asking because every single Aminor at the dealership was on hold so he paid them \$24,999 so he could just have an Aminor.

Dillon James from Tundra Land was plowing his driveway. It took him almost an hour to do one mile with his other four-wheeler. Now that he got the Aminor it only takes him about fifteen minutes to plow his driveway. Now he is even doing other peoples driveways. To get his Aminor he had to drive 400 miles to a dealership. He also paid \$600 more than the original price the dealership was asking.

Matt Miller from Muckville, Muddy said he has raced in about fifteen races since he got his Aminor. In those races he hasn't finished worse than third, only taking third once, second five times, and first nine times. He says that when he's on the racetrack that the Aminor just fly's compared to the rest of the four-wheelers out on the track. He also says that the four-wheeler has unbelievable control when you drive it. The four-wheeler barely even slips on ice when you drive on ice.

Boone Wade has an Aminor that race says that he has won every single race since getting his Aminor. In eleven races with the Aminor he has won over \$100 grand in prizes. He also says the Aminor can fly but still have outstanding control in slick spots on the race track. In the eleven races there have been at least three or four more four-wheelers that are Aminors out of the twenty four-wheelers in the race. He also said that this is the best four-wheeler anybody has ever made.

Ever since the Aminor was getting excellent reviews the whole world was using the Aminor to clean the roads off. The drivers who clean off the roads said that it shaved off about four hours of cleaning off the roads every time it snowed.

The Aminor is so popular that they have to keep building more factories to build the Aminor so they can keep up with the demand of the Aminor. The Aminor is so popular that it is rare to see four-wheeler other than an Aminor. Now they have license plates so they can drive the Aminor on the roads. The Aminor is even more popular than all of the cars made. The four-wheeler is even legal in foreign countries across the entire world. Most people now would rather have an Aminor than \$22,799 in cash. You even can win the Aminor on game shows as a prize. These four-wheelers are almost everywhere you go. They are even racing the Aminor for money and

whatever else they can win. When they race it's hard to tell who will win because there are about three or four Aminal's out of twelve in the race.

New "Magic" Gas of Amazing Goodness By: Ryan Talo

There has recently been a new type of fuel engineered by scientists in Guatemala, it's called Quantum Gas, and it makes your vehicle run better than any other gas has before. Scientists have discovered that by mixing simply banana peels, pocket lint, and warm Guatemalan tree bark, that this new Quantum Gas will be created as the result. This gas is no ordinary gas though; this gas makes your vehicle go faster than any car has gone before.

How does it do this you may ask? It is simple really, the gas is made up of Carbon Monoxide molecules, which when exposed to the fibers of banana peels and the starch residue in pocket lint creates an effect that results in variations of explosions between the molecules of the two atom types which then causes the lymph nodes to activate the solar electrons in the medulla oblongata reactor. These molecules then travel through the viscous liquidite, forming new substances which can then be traced back to the original point of origin. These newly formed particles are also the subsequent reactions in the zoo flagellates and therefore result in doing which that has never been done before in the first place and also which will never more be so intricately unknown to be itself.

Therefore we can conclude that these are the only ones that will ever be Quantum Gas molecules in the first place; this means that the particles of this gas will then be transferred into the subsonic cro magnons of the reactant pattern manipulatives.

The next object in this everlasting pattern of transubstantiation is becoming solely reliant on forming a separate molecule of new matter completely resolute of the other mixture. This means that even when the others react the new substance is already done reacting. So that is basically

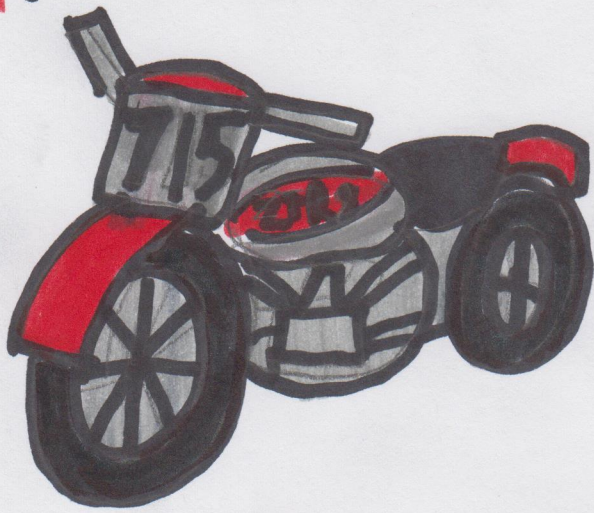

how it works. Buy it today. I recommend it greatly. It improves the conditions of your car as well as cleaning out the engine by itself periodically. This gas is a new step in vehicle evolution.
