

Name That Number

Players: 2-4

What You Need:

Deck of playing cards with the face cards removed.

How To Play:

1. Shuffle the deck and place five cards faceup on the playing surface. Leave the rest of the deck facedown. Then turn over the top card of the deck and lay the card down above the other five cards. The number on this card is called the "target number."
2. Players take turns. When it is your turn, try to name the target number. You can name the target number by adding and/or subtracting, or for higher level mathematicians, multiplying and/or dividing can also be used along with adding and subtracting.
3. If you can name the target number, take the cards you used to name it. Also take the target number card, and replace all of the used cards with new cards from the top of the deck.
4. If you cannot name the target number, your turn is over, and it is the next player's turn.

If you want to play for points, see below:

Anytime you use addition you get 1 point.

Anytime you use subtraction you get 2 points.

Anytime you use multiplication you get 3 points.

Anytime you use division you get 4 points.

Anytime that you can use all 5 cards you get 5 bonus points along with your other points.
